GET A COMPETITIVE EDGE WITH *ePLAN*[®] A Truly Professional Electrical CAE Software Solution

Whether they compete at a regional, national or global level, today's manufacturers and automation suppliers are faced with the same challenge – They must be faster, cheaper and better, or they will quickly be out of the race. They must look for ways to increase productivity through high value-added products to meet their customers' specific requirements.

In the electrical engineering field, a proven way to achieve high automation is through a professional computer-aided-engineering (CAE) software solution developed precisely for generating wiring diagrams. EPLAN Software and Services is the provider of advanced electrical design automation solutions. Our sophisticated CAE products coupled with training, technical support, customization and consulting services help thousands of manufacturers, OEM's design and build companies get a competitive edge through top quality, fast time-to-market and significant bottom line results every day.

As the world's most advanced controls hardware design automation solution, *ePLAN*[®] offers undisputed benefits.

Because *ePLAN*[®]...

- is the culmination of solid experience, constant innovation and global market leadership for over 20 years,
- is developed by more than 80 highly skilled technical professionals who are hard at work every day to ensure the highest level of software performance, capability and quality,
- is locally supported and serviced in over 50 countries around the world,
- drastically increases design efficiency to yield a fast ROI – typically in less than a year,
- significantly reduces or eliminates costly rework by enhancing quality,
- provides corporate-wide uniformity through standardization,
- offers high degree of flexibility to meet virtually any country, industry and customer specific requirement,
- has the ability to interface with other enterprise systems due to its open structure,
- offers even further customization and automation via its powerful API (Application Programming Interface),
- goes beyond just the design capability by automatically generating important data and reports for use in other disciplines such as purchasing, quoting, manufacturing, panel build, maintenance, etc.
- **And just as importantly, it allows the electrical engineers and designers do what they are trained to do by eliminating the mundane, manual tasks which add zero value to the design engineering process and only hinder productivity.**

Let us help you compete in the global marketplace and meet your corporate efficiency goals and customer objectives with our pioneering electrical CAE solutions.

To get started on the path to improving the efficiency of your controls hardware design engineering, call 888-375-2668 and schedule a presentation of *ePLAN*[®].
